

Your beauty destination

Destination

Croatia

Croatia is a sovereign state at the crossroads of Central Europe, Southeast Europe, and the Mediterranean. Its capital city is Zagreb, which forms one of the country's primary subdivisions, along with its twenty counties. Croatia's Adriatic Sea coast contains more than a thousand islands. The country's population is 4.28 million, most of whom are Croats, with the most common religious denomination being Roman Catholicism. Croatia has also made a name for itself as a leading destination for health and wellness tourism.

City Zagreb

Zagreb is the capital and the largest city of the Republic of Croatia. It is located in the northwest of the country, along the Sava river, at the southern slopes of the Medvednica mountain. The wider Zagreb metropolitan area includes the City of Zagreb and the separate Zagreb County bringing the total metropolitan area population up to 1,2 million people. It is the biggest metropolitan area in Croatia, and the only one with a population of over one million.

Ban Jelačić is the central square of the city, named after ban Josip Jelačić. Situated just below the hillside settlements of Kaptol and Gradec, it has served as the city's commercial heart ever since 1641. Zagreb is the seat of the central government, administrative bodies and almost all government ministries. Almost all of the largest Croatian companies, media and scientific institutions have their headquarters in the city. Zagreb is the most important transport hub in Croatia where Central Europe, the Mediterranean and Southeast Europe meet, making the Zagreb area the center of the road, rail and air networks of Croatia. It is a city known for its diverse economy, high quality of living, museums, sporting and entertainment events. Its main branches of economy are high-tech industries and the service sector.

POLIKLINIKA BAGA

Certificates of excellence

Poliklinika Bagatin is a proud owner of two important certificates, proving its high quality and standard that place it on par with top clinics in the world. Patients from all over Croatia, Europe and, increasingly, the world are traveling to Poliklinika Bagatin to experience 5-star treatment in a warm and friendly environment that features the latest in technology and medical expertise.

Medical Tourism Association

For decades, travelers have trusted destination guides for information such as culture, language, gastronomy, tourism activities, currency and a highlight of things to do in the destination they visit. Currently, as a result of the high cost of healthcare, limited access to high technology and specialized surgical techniques among other factors, patients are finding themselves looking for alternative options for treatment, many times, outside of their local community, state and even country.

Global Clinic Rating

Global Clinic Rating (GCR) is an international accreditation organization that rates and grades medical providers based on 4 criteria - Expertise, Facilities, Services, and Feedback. Range and quality of both medical and non-medical services and procedures also reflect on the rating system of each clinic, and considering that the patient focus takes precedence patient reviews from unbiased and independent websites are an integral part of the rating process.

TIME FOR YOURSELF

Nowadays, in times dominated by stress and accelerated pace of life, take a moment for yourself, slow down and take a deep breath. Find the time that you will dedicate to yourself. At Poliklinika Bagatin we are aware of individuality and different needs of every person, therefore our consultations are extremely important part of our service. Our biggest goal is to understand your needs, fulfill them, and exceed your expectations.

As a visionary beauty expert, our clinic offers a solution to all your problems by using a variety of aesthetic and dermatological treatments aimed at correcting facial features, removing unwanted changes or signs of aging and maintaining the beauty of your skin. In order to complete the overall care for beauty and health, we provide the highest standard of dental care in a professional, relaxed, and familiar environment, as well as a range of services from basic, preventive dentistry to complex reconstructive dentistry, which includes dental implants, oral surgery, and prosthetics.

POLIKLINIKA BAGATIN

Destination that connects beauty, revitalization, and relaxation.

FACE

Some of us are simply born with a beautiful and flawless skin, but for most of us skin is the mirror of our lifestyle, stress, diet, and lack of time and attention. Our skin gradually loses its elasticity as a result of the deterioration of collagen and elastin fibers, as well as changes in the fat pads under skin that occur with age.

Unique approach to facial treatments allows us to give you the designed experience just for your skin type. Each treatment begins with analysing unique requirements of your skin, followed by a treatment that will fulfill your specific needs and recommendations for skin care at home.

Botox and Juvederm dermal fillers

Wrinkles occur as a result of the natural aging process. Their development cannot be prevented entirely, but can be significantly decreased. **Botox** therapy is a safe, most efficient, and popular aesthetic treatment for removing wrinkles around the eyes and forehead. **Juvederm dermal fillers** fill wrinkles and restore lost volume of the face. They are ideal for the correction of facial contours, lip augmentation, removing dark circles or bags under your eyes, and for filling wrinkles on the neck and décolleté.

Radiofrequency rejuvenation - Med Visage and Venus Legacy

Radiofrequency rejuvenation is a revolutionary technique that improves skin texture, rejuvenates, and improves skin tone. **Med Visage** combines radiofrequency with ultrasound to achieve a better lifting effect. This exceptional treatment removes wrinkles, regenerates cells, and stimulates the creation of collagen, which helps the skin retain a youthful appearance over a longer period of time. **Venus Legacy** is a treatment that uses multipolar radiofrequency that naturally stimulates the healing and creation of new collagen, which leads to skin tightening and rejuvenation.

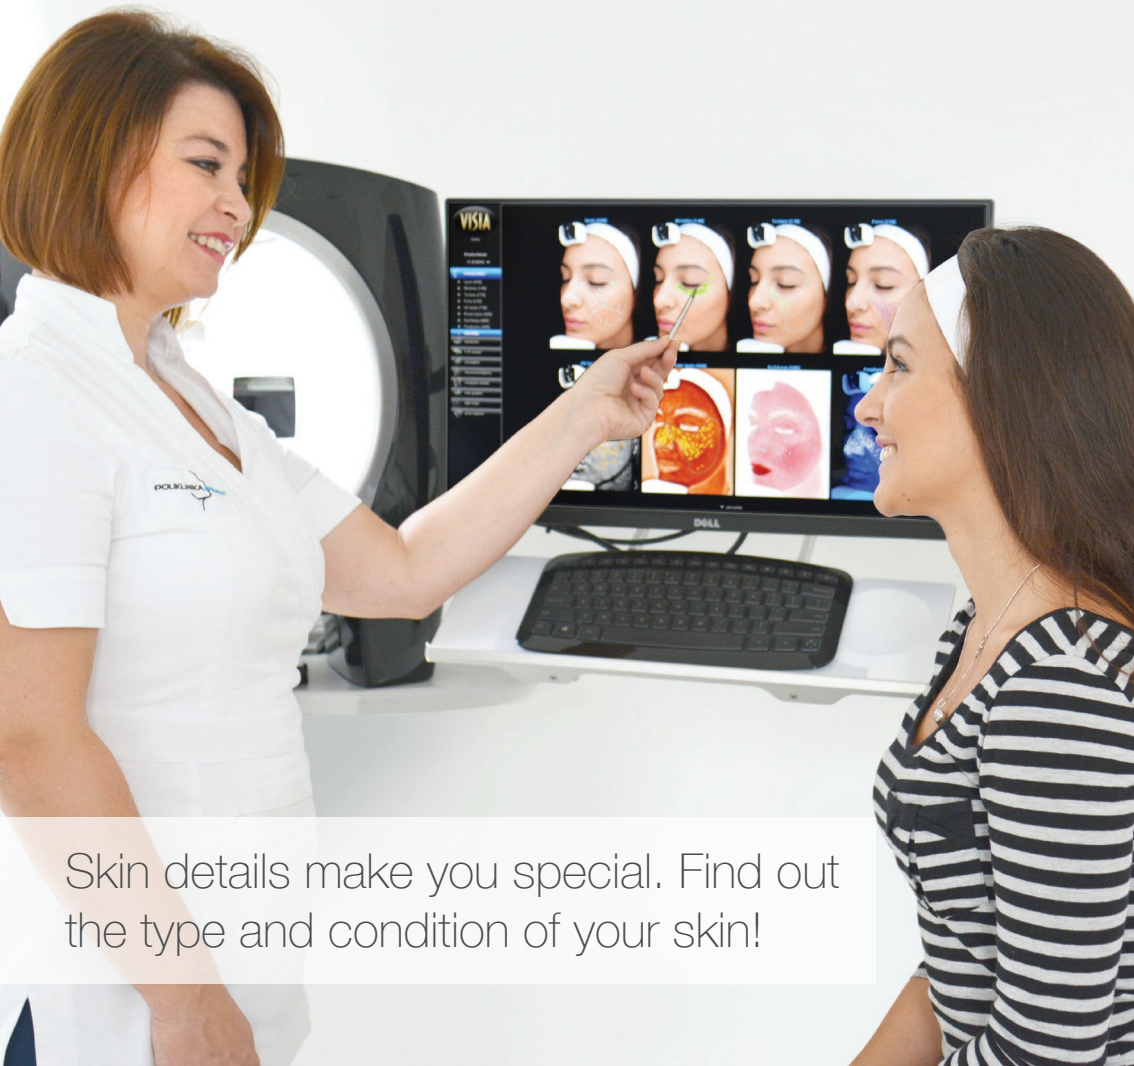

Laser rejuvenation

Laser rejuvenation treatment, known as "Skin Rejuvenation", reduces the visible signs of skin aging. Laser rejuvenation includes three effects: face lifting, removal of tiny capillaries, and reduction of tiny imperfections of the skin. If you have visible lines, open pores, fine wrinkles on your face or just want to improve the skin tone, you are a good candidate for non-invasive laser rejuvenation.

Mesotherapy

This is one of the most modern methods of facial rejuvenation. This method includes applying revitalizing ingredients into the skin with a needle, which ensures the transition through the epidermal barrier and application of active ingredients, such as hyaluronic acid, vitamins, minerals, and antioxidant agents in the deeper layers of the skin, where they are most efficient. Mesotherapy ensures hydration, shine, and moisture of the skin. Here at our clinic we use products of the most renowned manufacturers. The novelty in our offer includes acclaimed Aesthetic Dermal RRS products, by one of the best manufacturers in the mesotherapy field in Europe.

Skin details make you special. Find out the type and condition of your skin!

VISIA PROFESSIONAL SKIN ANALYSIS

Everyone has a slightly different skin type and requires special care. If your skin is dry, greasy, sensitive or a combination of the above you can prevent inflammation, revive dull skin and prevent early aging by using creams, tonics, and facial treatments intended just for your skin type.

At Poliklinika Bagatin we offer VISIA professional skin analysis with advanced technology of skin display in order to determine the actual type of your skin condition before treating the problem. With the help of VISIA professional skin analysis, it is possible to see an in depth placement of the most pronounced lines and depth of wrinkles, all vascular and pigment changes, the effects of UV radiation, the width and condition of the pores, and the presence of bacteria.

Based on the VISIA analysis, we recommend treatments and products that are best suited for your condition. It is important to emphasize that VISIA allows a completely new, individual, and very thorough approach.

REVIDERM CONCEPT

REVIDERM combines innovative science with the power of nature in order to achieve the highest quality. It is committed to producing only the best products in harmony with nature.

In cooperation with international research groups, only specially selected and confirmed active agents are included in their innovative formulas. High-quality standards ensure constant control of efficiency and safety. The choice of active agents and their high concentration also contribute to getting the optimal results.

Poliklinika Bagatin uses REVIDERM products and treatments incorporated in a large number of its services. We feel proud for being the official REVIDERM reference center for the entire region.

REVIDERM Skin Peeler microdermabrasion

This innovative treatment uses crystals for gentle and safe deep skin cleansing. This type of microdermabrasion is used during almost every REVIDERM treatment and often before anti-aging treatments in Poliklinika Bagatin. This treatment has an extraordinary effect and along with REVIDERM dermocosmetics, which are enriched with active ingredients, leads to visible changes on the skin.

REVIDERM dermocosmetics

REVIDERM Skintelligence line is enriched with the finest peptide ingredients, which alleviate the signs of aging, reduce wrinkles, and deeply hydrate the skin while preventing deterioration of cells. It is intended for normal and mature facial skin.

Cellucur Cosmeceuticals line has been developed specifically for the maintenance of the skin that needs special care. This line of skin care offers effective solutions for skin with imperfections caused by puberty, hormone imbalances, couperose stimulants, cellulite or scars.

REVIDERM Premium Skindesign 4D line is characterized by its special intensity and full effect. It provides high concentration of active ingredients that penetrate into every dimension of the skin and selectively develop its own effects. It nurtures, protects, regenerates, and stops the aging process of your skin.

REVIDERM facial treatments

Every face is different and therefore has different needs. REVIDERM offers a wide range of treatments for the face that are suitable for different types, conditions, and needs of the skin. REVIDERM treatments offer complete skincare for different skin conditions such as dehydration and dryness of the skin, couperose, the appearance of acne, and are also used for alleviation of minor scars and wrinkles on the face. With these treatments you can achieve facial cleansing, skin rehydration, and nutrition with a balanced appearance of all facial areas. All this provides a healthy and fresh look of your skin.

BODY

Stress is a daily companion in your personal and business life and you need to take a day just for yourself in order to recover your physical, as well as your spiritual beauty. An old proverb says: "A healthy mind in a healthy body", and we will add to this: "A healthy and beautiful spirit in a healthy and beautiful body."

Our unique concept of taking care of your body will provide you with effective solutions that will meet the needs of your body. Whether you desire silky smooth skin, loss of a few centimeters or to remove cellulite, we have the right solution for you.

Med Contour Multipower

Poliklinika Bagatin is the first in the world to present the newest generation of the Med Contour Multipower device that combines both ultrasound and radiofrequency in order to achieve the effective, safe, and painless nonsurgical body contouring, cellulite removal, as well as skin and body tightening. The new applicator "Body shape" contains bigger probes and a specially designed form through which the localized fatty deposits can be broken up more easily. The treatment is non-invasive and painless, and the course of the treatment is very pleasant, effective, and safe. The results are seen after the very first visit, however best results are obtained after 3 to 5 treatments.

Venus Legacy multipolar radiofrequency

Venus Legacy treatment uses 4D technology, combining multipolar radiofrequency, pulsed electromagnetic fields, VariPulse and RealTime Thermal Feedback technologies. This treatment is ideal for skin tightening, reduction of fat cells deposits, removal of cellulite as well as reducing of stretch marks on hands, thighs, stomach, back, hips, and buttocks. During the treatment, the new collagen is created, as well as new elastin fibers, which contribute to the flexibility, tightness, and elasticity of your skin.

Zerona cold laser

You eat right and exercise regularly, but still struggle with critical areas. Zerona is the first non-invasive cold laser for body contouring, which effectively removes fat cells and reduces body size of the treated area without negative side effects. The treatment is ideal for people who have excess fat in certain parts of the body because Zerona breaks down fat cells, which eventually results in a visual reduction of cellulite. Zerona is a fast solution, which means that in just a few weeks, you can reduce your dress size without pain, surgery or recovery time.

Laser hair removal

Removal of unwanted hair can become a truly grueling routine, which takes time, and the results last for a short period of time. Laser hair removal is a medical procedure, during which the diode laser removes unwanted hair by applying intensive heat to the follicle in order to damage and prevent the regrowth of hair. This treatment is best for those who want to achieve the long lasting feeling of smooth skin.

In-depth analysis of health.
Discover what your body is telling you!

SECA MEDICAL BODY COMPOSITION ANALYSIS

Before body contouring, it is necessary to first get a deeper insight into the condition of your health and needs of your body, and then determine the treatments which will be the best for you to achieve the desired results. The body composition, which consists of lean mass, fat tissue and total body weight plays an important role in deciding what approach is the best for you.

At Poliklinika Bagatin we use Seca mBCA 515 analyzer, which represents the latest generation of body composition medical analysis, which along with the body weight measures subcutaneous fat tissue, muscle mass, percentage of water, body mass index, as well as basal and active metabolism. All the data is gathered on the basis of height, age, gender, and physical activity level of the person being analyzed. Measurements are processed by six analytical modules and the results are presented in an easy to understand graphics.

After the analysis at the Poliklinika Bagatin you can get a therapy plan, which includes treating aesthetic imperfections such as cellulite and fat cells deposits, with the help of clinically tested treatments - Med²Contour ultrasound therapy, Venus Legacy multipolar radiofrequency, and Zerona cold laser.

NUTRITIONAL CONSULTING

Nutrition is an important part of a healthy lifestyle. Without the three pillars of proper nutrition, which are balance, moderation, and variety, there is a chance that you will not have enough energy for everyday activities, thus exposing your health to risk. To help you feel and look good, Poliklinika Bagatin offers nutritional consulting, which will enable you to meet the health goals and achieve the desired figure.

Nutritional consulting includes evaluation of current health and eating habits, as well as the level of physical activity. Based on these parameters our nutritionist will analyze and evaluate nutritional status of your body, measure how much energy your lifestyle requires and develop guidelines that will assist you in the selection of optimal food and physical activity in order to be healthier, look better, and achieve as well as maintain the desired results.

MEN

Beautiful and nourished skin is not only a challenge and a privilege of women. Men are a symbol of power and strength, but their skin is also sensitive to external influences and requires appropriate care adjusted to their individual needs and skin type.

In comparison to women, men's skin is more prone to problems such as clogged pores, blackheads, redness or capillaries on the face. Work and our current lifestyle cause stress in the psychological sense, but they also have a stressful effect on our skin. If you are considering ways in which you can provide your skin with a well-deserved treatment, have a look at our recommended treatments for men. You can try one or a combination of these, depending on the needs of your skin.

Botox antiperspirant treatment

For most people, sweating is a natural, normal process that cools the body and controls its temperature, but for some sweating represents a daily discomfort, which is reflected in the large stains visible on the clothes in the armpit areas. Control of excessive sweating is proved to be possible and very effective by the application of Botox. Clients can have a significant reduction in sweating for more than six months after the treatment. Medical research has shown, as well as practice, that it is the most effective remedy against this unpleasant problem.

Hair and scalp mesotherapy

For decades, mesotherapy has played a major role in the treatment of hair loss and problematic scalp. This method significantly restores hair structure, solves problems with hair loss and gives a healthier appearance of the scalp. After mesotherapy treatment you will have a stronger, healthier, and more beautiful hair full of volume. With the help of the high-quality vitamin-mineral cocktail RRS XL Hair, circulation of the scalp is improved, as well as better nutrition of hair follicles, which eventually leads to the recovery and further hair growth.

Laser removal of tattoos

With the increasing popularity of tattoos we are witnessing an increased demand of tattoo removal as well. Laser TattooStar Effect Combo represents the latest technology of laser removal, which can completely remove or at least fade your tattoo. Thanks to a selective removal, the laser penetrates the skin and reaches the ink particles in the skin. The pigments absorb light energy and decompose. Once destroyed, they are absorbed and removed by the lymphatic system of the body. The treatment is quick and very effective, and it does not cause injury or scarring.

Zoom teeth whitening

Healthy and white teeth are coveted by many, therefore it is no wonder that the changes in the color and shade of teeth can present an unpleasant aesthetic problem. Our dentists use the Zoom WhiteSpeed teeth whitening technique, which is the most popular and well known teeth whitening option in the United States. Zoom WhiteSpeed by Philips, the Dutch manufacturer, is an innovative and effective professional teeth whitening option that is based on the most advanced LED lights technology and can whiten teeth up to 8 shades whiter.

DERMATOLOGY

Healthy skin is essential for beauty, but for many it is very difficult to achieve. The fast pace of life, unhealthy diet, and external factors affect the largest human organ which is also the most exposed and vulnerable. Therefore, the top dermatologists have gathered their knowledge and experience to reveal to women, and men equally, the secrets of a beautiful and radiant skin.

One of those secrets is in the use of laser technology that has become an irreplaceable solution for skin problems. Today, with lasers you can almost completely remove body hair, capillaries, rejuvenate skin, remove redness, enlarge pores and acne. At Poliklinika Bagatin we use 4 different lasers from the renowned German company Asclepion Laser Technologies that has extensive experience in the production and development of premium lasers for medical usage.

Digital dermatoscopy

From early childhood to the adult age, moles appear constantly and the existing ones are changing. At Poliklinika Bagatin we control the changes of moles by using a high-quality digital dermatoscope microDERM, which enables a standardized examination of suspicious skin changes as well as detailed personal image documentation and monitoring of moles throughout time. This thorough approach allows early detection of melanoma and its timely treatment.

Laser removal of moles

At Poliklinika Bagatin moles can be removed by using different methods. Laser removal is the easiest of them due to the use of high-quality Erbium YAG laser. Laser beam heats and destroys the mole, and the recovery is painless, without seams and scars. When removing moles and other skin changes with laser, scars are less likely to appear in comparison to other methods, which makes this treatment the most popular procedure for removing skin changes.

Laser removal of veins and capillaries

Today, a large number of women suffer from capillaries on their legs, which is primarily an aesthetic problem. Spider veins and capillaries are a result of genetic predisposition, and they get worse with unhealthy lifestyle. The most important thing is to recognize changes in the earliest stages and prevent the development of any complications. At our clinic, we use a Diode laser MeDioStar NeXT to treat vascular structure gently without damaging the epidermis. The laser influences the coagulation of blood vessels, thus reducing the impact of external factors on their fragility and progression.

Laser skin redness and pigmented lesions

With yellow laser QuadroStarPRO, we effectively solve the problem of pigment changes, redness or vascular lesions on the face. The treatment is gentle and painless with extraordinary results and minimal risks. This simple laser treatment starts with applying heat of the laser on the problematic area, which removes changes on the blood vessels or pigment changes, and makes them disappear.

DENTISTRY

A smile is often the first feature you notice in others, thus healthy and beautiful teeth are important in every person's life in order to feel and look good.

Dental center at Poliklinika Bagatin provides the highest standard of dental care in a professional, relaxed, and familiar environment, as well as a range of services - from basic, preventive dentistry to complex therapy, which includes dental implants, oral surgery, and prosthetics.

Using the most advanced technology and artistic abilities, dentists at Poliklinika Bagatin plan treatments taking into account specific needs and desires of each person. Our goal is not only to restore the optimal dental health of your teeth, but also the confidence, which will open further doors for you.

Diagnostics with 3D imaging - orthopantomogram (X - Ray)

Diagnostics with the help of orthopantomogram is an indispensable technology in dental offices, which represents an important step in determining the appropriate therapy. Diagnostics is carried out with the help of Planmeca ProMax 3D, which has a low radiation level and poses no danger to health, while giving a greater insight into your present oral health. Creating a digital orthopantomogram at Poliklinika Bagatin is very simple and takes only a few minutes.

Dental implant center

Dental implants are the first choice in the search for replacement of lost teeth. They look and feel like natural teeth, and present a long-lasting solution for the replacement of one or more teeth that are missing. At Poliklinika Bagatin, our first choice are high-quality and verified Straumann dental implants, that have a 20-year tradition of scientific research work and success. Implant treatment is a practical, durable, aesthetic, and functional solution that will give you a long-lasting healthy bite.

Dental crowns and veneers

Ceramic crowns and veneers are the most common prosthetic solution to restore functional bite and to improve the aesthetics of teeth. Veneers are made of ceramics that perfectly imitates the color of the tooth, and the crown protects the tooth from further damage and also prevents possible further tooth decay. Crowns and veneers may also correct the appearance and the color of the tooth with the aim of restoring a nice natural smile and high self-confidence.

Laser therapy and treatments

Lasers are used in dentistry as a supplement to standard dental procedures, while in some therapies they completely replace the traditional approach. This type of treatment provides a milder, less invasive therapy and saves tooth structure while providing painless dental treatment. In our clinic we use two dental lasers by American manufacturer BIOLASE for laser teeth whitening, cavity removal, and periodontal treatment.

The smile you always wanted.
Design it with us!

SMILE DESIGN DIGITAL SMILE SIMULATION

Smile design requires the analysis of facial characteristics in order to create a natural and proportional look, while at the same time it enables you to participate in the creation of your own smile. The primary goal of smile design at Poliklinika Bagatin implies oral rehabilitation which will satisfy your aesthetic demands and ensure beautifully natural teeth. Such a procedure improves the quality of life, boosts confidence, and enhances the functionality of teeth to make the patient feel better and look more attractive.

At Poliklinika Bagatin we use the Romexis Smile Design system by the prestigious Finnish company Planmeca. This system has excellent diagnostic advantages of visualization of the end result of smile reconstruction, which ensures improved communication between our dental team and our clients. With such an approach we allow you to clearly express your wishes and expectations and together with our team create a smile which will result in your overall and long-term satisfaction.

PLASTIC SURGERY

At Poliklinika Bagatin, we correct different conditions of the skin and body with plastic surgery, which are intrinsic by birth or occur throughout life. After the first consultation with our surgeons, you will be advised on the type of the procedure that is best suited according to your wishes, diagnosis, and other circumstances.

In the state-of-the-art equipped rooms at Poliklinika Bagatin we provide a large number of cosmetic, plastic, and reconstructive surgery procedures. Regardless of which cosmetic procedure you choose at Poliklinika Bagatin, you will receive a comprehensive service which includes a consultation, preparation, and operation with consequent postoperative care and treatments for a faster recovery.

VECTRA 3D consultation

We are the only clinic in the region that can offer you consultations for breast augmentation, breast lift, nose correction, and liposuction with VECTRA 3D photosimulation to provide you with the top personalized care and to determine whether the decision to undergo the procedure is right for you. This innovative technology allows us to share with you photos of how you will look like after the procedure. During the consultation, with the help of VECTRA 3D photosimulation, 3D images of your body or face are gathered in order to study and plan your operation. We put great efforts in improving the appearance of our clients in a more natural way.

Plastic surgery of the face

Plastic surgery of the face gives opportunity to correct numerous (aesthetic and functional) irregularities and to remove the signs of aging that can affect self-esteem. By changing the way you look, plastic surgery can help you in changing attitudes about yourself. The reconstruction of the face can renew the face with congenital malformations, which leads to the improvement of your life. At Poliklinika Bagatin, the most popular plastic procedures of the face are nose surgery, ear surgery, eyelid correction, and a facelift.

Plastic surgery of the breasts

Our clinic with its renowned general and plastic surgeon offers a number of procedures for breasts correction - breast augmentation, lift, and reduction. Breast augmentation is one of the most common aesthetic surgeries in the world, which is chosen by a larger number of women every day. Nowadays, with highly efficient surgery techniques and high-quality implants the correction of small, undeveloped or asymmetrical breasts should no longer be an unfulfilled dream for a large number of women.

Plastic surgery of the body

Plastic surgery of the body enables people to improve certain parts of their bodies or to return to a healthier or more attractive condition. At Poliklinika Bagatin our professional and experienced surgeons, who have extensive qualifications in plastic and reconstructive surgery will take care of you. We offer our clients a wide range of plastic surgery procedures for the body, consultations, and comprehensive care of patients. Plastic surgery procedures for the body include abdominoplasty, VASERLipo ultrasound liposuction, as well as aesthetic and functional correction of intimate body parts - labiaplasty.

Family tradition and high
quality service

Poliklinika Bagatin

During its 20 years of existence Poliklinika Bagatin has become a synonym for quality of service by global standards. We're a leading Croatian polyclinics specialized for plastic surgery, dental medicine and dermatology. We differentiate ourselves in the market and maintain the status of a favorite beauty destination.

Poliklinika Bagatin offers over 250 services in 7 different specializations across 2 locations. Dermatology, dentistry and cosmetology units are located in the Green Gold Tower, just above the DoubleTree by Hilton hotel. 900 square meters with an incorporated ultramodern regional laser center is at your disposal and the dental center. Our body shaping center is also located here, along with our dermatology unit that treats all sorts of facial and body skin problems.

Our first clinic specialized in cosmetic surgery was founded in 1995 and is located downtown Zagreb. Medical doctors Dinko Bagatin, whose specialty is general and plastic surgery, and Tomica Bagatin, plastic surgeon of head and neck, have both continued the legacy and work of their father, Marijo Bagatin, MDSc and a renowned maxillofacial surgeon. Through cosmetic surgery they increase the quality of life of people who require it.

Wishing to provide nothing but the premium service, we choose only the technology and equipment that have a proved seal of quality, while at the same time presenting the most modern scientific achievements. The most crucial metric and proof of our quality work is the satisfaction of our clients who, through their loyalty, motivate us to strive for the best.

GREEN GOLD TOWER

Poliklinika Bagatin is located on the 10th floor of Green Gold Tower with a beautiful view of the whole city.

We invite you to join us and experience the unique experience of relaxation, regeneration and rejuvenation. Contact us to arrange your time in our clinic.

We will be happy to accommodate you!
